

CLUE-Study

Participants wanted!

Survey investigating the need for support services and gaps in German health care system for Post-/Long-COVID patients

Study period 15.02. – 15.05.2022

For an anonymous online survey the University of Bonn Medical Center is looking for participants who had COVID-19 and lived in Germany following acute infection or those who were treated for it in Germany.

The survey asks about your experiences and the services you used in the German health care system. Since a large number of patients continue to suffer from physical and psychological symptoms after their infection, our aim is to identify possible needs and gaps in the after-care of COVID-19 infection in the German health care system.

The survey takes 20 – 30 minutes.

Please help us make treatment options for Post-/Long-Covid sufferers more transparent and accessible.

Who is the survey aimed/targeted at?

Persons aged 18 and over who

- » had a COVID-19 infection in the past and
- » lived in Germany after the acute phase or
- » were treated in Germany for COVID-19 infection.

How can I participate?

The link to the survey and further information can be found at:
